INLINE PLASTICS CORP.

42 Canal Street, Shelton, CT 06484 • 800-826-5567 • www.inlineplastics.com

Founded in 1968, Inline Plastics Corp. is a privately owned plastic thermoforming company that manufactures over 300 different clamshell and two-piece containers. All of the company's containers are FDA-compliant for direct food contact, and are used in the bakery, produce and

foodservice markets. Inline Plastics has manufacturing and warehousing facilities in Shelton, CT; Salt Lake City, UT; and McDonough, GA; as well as a R&D facility in Milford, CT. We are dedicated to developing innovative new products directed by the voice of the marketplace and committed to providing world-class service to our customers.

Inline Plastics Corp.
Good Things Come In Our Packages®

In response to customer demand for environmentally friendly, sustainable packaging, Inline Plastics has converted its entire line of containers to polyethylene terephthalate (PET), the same recyclable material used to make water and soda bottles. In fact, our PET material is produced using a patented, new super-energy efficient process that reduces the carbon footprint of the material to match that of material containing 50 percent post-consumer recycled bottles, but without the loss of clarity and resiliency commonly found in recycled PET containers. For every ton of Inline PET material used, enough CO2 equivalents are saved to drive an average passenger car over 2,700 miles!

One of our innovations in packaging design has been the development of the first thermoformed clamshell containers that are resistant to in-store tampering without the addition of a wrap-around label or a shrink band. Our Safe-T-Fresh® line of clamshell containers features a leak-resistant seal, and they are tamper-evident and tamper-resistant upon closing. The containers incorporate a unique tear-strip hinge called Safe-T-Gard®, which is easily removed by the consumer to gain access to the contents of the container, but discourages tampering in retail outlets. Safe-T-Fresh® containers are ideal for cut fruit, salads, snacks, salsa, sandwiches and bakery products, and are available in round or rectangular styles in 8-oz through 64-oz sizes. There is also a version with a built in hang-tab for hanging on merchandising racks.

Supporting Inline Plastics' line of containers is a group of packaging automation systems tailored to handle and process the packing of the containers. Our experienced engineering staff is happy to assist our customers in the integration of our automation systems into their current processes and facilities. From container filling and locking to top, bottom, or wrap-around labeling, Inline Plastics is the only company in the industry that provides in-house developed automation solutions that will help our customers reduce costs while increasing throughput and operating efficiencies.

SAMBRAILO PACKAGING

800 Walker St, Watsonville, CA 95076 • 800-563-4467 • www.sambrailo.com

Sambrailo Packaging is a third-generation family-owned company that has served the produce and floral industries since 1923. With locations throughout California and Mexico, we have built our reputation on innovation, service and quality. Known for "design to distribution" packaging solutions, Sambrailo Packaging has always focused on "whatever is best for the produce." This motto continues to be the underlying drive behind the lasting success of Sambrailo Packaging.

Sambrailo proudly specializes in improving and designing packaging systems for all types of berries, grapes, tomatoes, leafy greens and value-added produce. We then enhance our products with superior service—including on-site clamshell labeling, tray make-up, vendor-managed inventory and warehouse-to-field distribution.

Sambrailo starts by listening; listening to the needs of the grower/shipper, the retailer and the consumer. By staying closely in step with each of these three segments, we are able to develop innovative packaging solutions to add tremendous

value to the produce and floral industries. Through years of collaboration, Sambrailo has accumulated unparalleled knowledge about our customers and their products. When this experience is combined with our ingenuity and unique ability to forecast trends, the results are beneficial for all.

Over two decades ago Sambrailo was the first to develop a plastic clamshell container for the packing and shipping of berries. Since then we have continued to provide improvements to the industry with a patented freight-saving MIXIM System. This unique packaging matrix of clamshells, trays and pallets dramatically cuts down on cooling time and product bruising while maximizing the freight cube. Each feature results in cost savings throughout the distribution chain.

Several years ago we foresaw the effects that new, larger strawberry varieties would have on the clamshell capacity needs and proactively came to the market with a MIXIM LV (large volume) 1lb. clamshell. Recently, Sambrailo worked closely with machine manufacturers to create the RunRite family of clamshells. This new design for packaging

blueberries and grape tomatoes on high-speed packing equipment is available in 4.4oz, 6oz and 1-dry pint sizes. RunRite clamshells are proven to denest, fill, close, stack and cool more efficiently and with less down-time than any competitive packaging on the market.

Currently Sambrailo and its thermo-former partner have teamed up to bring clamshell production to new facilities in Mexico and Southern California. This recent expansion allows Sambrailo to produce our products right in the heart of major berry and vegetable growing regions. Our customers can now take advantage of faster delivery, superior service, and locally competitive prices.

Rapidly Efficient

RUNRITE™
HI - SPEED PACKAGING

- Easy de-nesting increases packing speed
- Aligns accurately with conveyor guides
- Dependable lid closure ensures less product loss
- 100% recyclable PET
